This form documents the artifacts associated with the article (i.e., the data and code supporting the computational findings) and describes how to reproduce the findings.

Part 1: Data

☐ This paper does not involve analysis of external data (i.e., no data are used or the only data are generated by the authors via simulation in their code).

☒ I certify that the author(s) of the manuscript have legitimate access to and permission to use the data used in this manuscript.

Abstract

The OhioT1DM data set(2018) contains glucose monitoring, insulin, physiological sensor, and self-reported life-event data for six patents with type 1 diabetes over eight weeks.

Availability

☒ Data **are** publicly available.
☐ Data **cannot be made** publicly available.

If the data are publicly available, see the *Publicly available data* section. Otherwise, see the *Non-publicly available data* section, below.

Publicly available data

☒ Data are available online at:http://smarthealth.cs.ohio.edu/OhioT1DM-dataset.html

☒ Data are available as part of the paper's supplementary material.

☐ Data are publicly available by request, following the process described here:

☐ Data are or will be made available through some other mechanism, described here:

Non-publicly available data

Description

File format(s)

☒ CSV or other plain text.
☐ Software-specific binary format (.Rda, Python pickle, etc.): pkcle
☐ Standardized binary format (e.g., netCDF, HDF5, etc.):
☐ Other (please specify):

Data dictionary

☒ Provided by authors in the following file(s):./real_data/code_data/code_data/Data_Ohio.csv in VEPO repo.
☐ Data file(s) is(are) self-describing (e.g., netCDF files)
☒ Available at the following URL: http://smarthealth.cs.ohio.edu/OhioT1DM-dataset.html

Additional Information (optional)

Part 2: Code

Abstract

The code for VEPO(URL:https://anonymous.4open.science/r/VEPO-B93E) calculations is consist of two parts, experiments in Section 5.1 of text and Supplement D.1 can be found in fold `toy` , while experiments in Section 5.2 and Supplement D.2 can be found in fold `real_data` . The source code of manuscript and ACC form is attached in this repo for the convenience of reviewing.

Description

Code format(s)

- ☐ Script files
    - ☐ R
    - ☒ Python
    - ☐ Matlab
    - ☐ Other:
- ☐ Package
    - ☒ R
    - ☒ Python
    - ☐ MATLAB toolbox
    - ☐ Other:
- ☐ Reproducible report
    - ☐ R Markdown
    - ☐ Jupyter notebook
    - ☐ Other:
- ☐ Shell script
- ☐ Other (please specify):

Supporting software requirements

Version of primary software used   Python 3.6.9

Libraries and dependencies used by the code   Seeing requirements.txt or "Installation" section in README.md in our repository for detail.

Supporting system/hardware requirements (optional)

Parallelization used

- ☐ No parallel code used
- ☒ Multi-core parallelization on a single machine/node
    - – Number of cores used: 10
- ☐ Multi-machine/multi-node parallelization
    - – Number of nodes and cores used:

License

- ☒ MIT License (default)
- ☐ BSD
- ☐ GPL v3.0
- ☐ Creative Commons
- ☐ Other: (please specify)

Additional information (optional)

Part 3: Reproducibility workflow

Scope

The provided workflow reproduces:

- ☐ Any numbers provided in text in the paper
- ☐ The computational method(s) presented in the paper (i.e., code is provided that implements the method(s))
- ☒ All tables and figures in the paper
- ☐ Selected tables and figures in the paper, as explained and justified below:

Workflow

Location

The workflow is available:

- ☐ As part of the paper's supplementary material.
- ☒ In this Git repository:
- ☐ Other (please specify):

Format(s)

- ☐ Single master code file
- ☐ Wrapper (shell) script(s)
- ☐ Self-contained R Markdown file, Jupyter notebook, or other literate programming approach
- ☒ Text file (e.g., a readme-style file) that documents workflow
- ☐ Makefile
- ☐ Other (more detail in *Instructions* below)

Instructions

The detail of how to use code and reproduce our results can be found in README.md in our VEPO repository.

Expected run-time

Approximate time needed to reproduce the analyses on a standard desktop machine:

- ☐ < 1 minute
- ☐ 1-10 minutes
- ☐ 10-60 minutes
- ☐ 1-8 hours
- ☒ > 8 hours
- ☐ Not feasible to run on a desktop machine, as described here:
